

Sectona Training & Certification Programs

Sectona's Training & Certification programs are designed to help you learn how to architect, build, deploy and manage Sectona privileged access solution

Determining and staying on top of the architecture, build and deployment of your privileged access solution doesn't need to be a complex process, but needs to be done right. Sectona offers training programs that equip you with the skills to execute a smooth deployment and manage ongoing operations. Get equipped on the best practices of implementation and get certified on installing the solution.

Sectona Training

The Sectona Training Program is divided into two sections targeted for two sets of audience.

- Administrator & Operations Workshop:**
 This is a structured workshop comprising of the platform and module concepts of Sectona Privileged Access Management solution. It is carefully designed to equip apprentices with a strong foundation for the configuration, administration and ongoing operational management of the Sectona PAM solution. The objective of the course is to present the core concepts of privileged access management, demonstrate the many features of PAM, and provide hands-on experience that can help manage the solution on a regular basis based on real-life and daily operational use cases.
- Implementation Workshop:**
 A well thought and designed workshop comprising of the platform and module capabilities of Sectona Privileged Access Management solution with key focus on design and installation of the solution. The objective of this workshop is to present apprentices (including service provider partners) the core and advanced concepts of privileged access management, demonstrate capabilities of PAM and provide hands-on experience to help plan out the design, build and complete installation of Sectona Privileged Access Management solution.
